# Numeric function in Excel

(i) Large( ) → To return nth largest value in given range.

Syntax :- =large(range, n)

| | A |
|---|---|
| 1 | 49 |
| 2. | 30 |
| 3. | 58 |
| 4 | 69 |
| 5 | 80 |

Q. Find 3rd largest value.

=large(A1:A5, 3) ∴ Result : 58

## Using if function

=large(if(range_with condition, result range), n)

| | A | B |
|---|---|---|
| 1. | Dept | Salary |
| 2. | IT | 3000 |
| 3. | HR | 5000 |
| 4. | IT | 2000 |
| 5 | HR | 5000 |
| 6 | IT | 9000 |
| 7 | Sales | 3000 |

Q. find 2nd highest salary in IT dept.

=large(if(A2:A7="IT", B2:B7), 2)

(ii) Small() → To return nth smallest value in given range.

Syntax =small(range, n)

Using if

=small(if(range_with_condition, result_range), n)

Q. To find 3rd smallest salary in IT dept

=small(if(A2:A7="IT", B2:B7), 3) ∴ Result: 2000

(iii) Median ( ) → to return middle value

Syntax :- =median (range)

Using if

Syntax :- =median(if(range_with_condition, result_range))

| A | B | C | D | |
|---|---|---|---|---|
| Empid | Name | Dept. | Salary | - - - |

Q. find median Salary where department is Sales

=median(if(C2:C = "Sales", D2:D))

(iv) Mode → Returns most occurring value.

=Mode(range_of_data)

Using if

=Mode(if(range_with_Condition, result_range))

Round() → Rounds a number to specified digits.

= Round(data, n)

Count() → to count numeric values in range.

= Count(range_of_data)

CountA() → to count non-empty values in range

= countA(range_of_data)

Countblank() → to count blank cells in range

= Countblank(range_of_data)
